

DRAGON Beam Normalization Study

- Knowing beam current incident on gas target important to DRAGON experiments
- Currently, only possible to measure current by insertion of Faraday cup
 - Process interrupts data collection
- Beta and elastic monitor rates are available during the entire course of a run
 - Wish to determine relation between these rates and the beam current
 - The rates could then act as a continuous monitor of beam current

Aim of Study

1. Determine the calibration constants needed to relate the elastic/beta monitor rates to the beam current

$$N_{\text{el.mon.}} = C_{\text{EM}} \times LT \times (d\sigma/d\Omega) \times P \times N_{\text{beam}}$$

$$N_{\beta} = C_{\beta}(Z_{\text{beam}}) \times F_q \times N_{\text{beam}}$$

$$i(t) = |e| \times q_{\text{in}} \times (dN_{\text{beam}}/dt)$$

$$d\sigma/d\Omega \propto (Z_{\text{beam}} Z_{\text{target}}/E)^2 [1 + \text{resonance}]$$

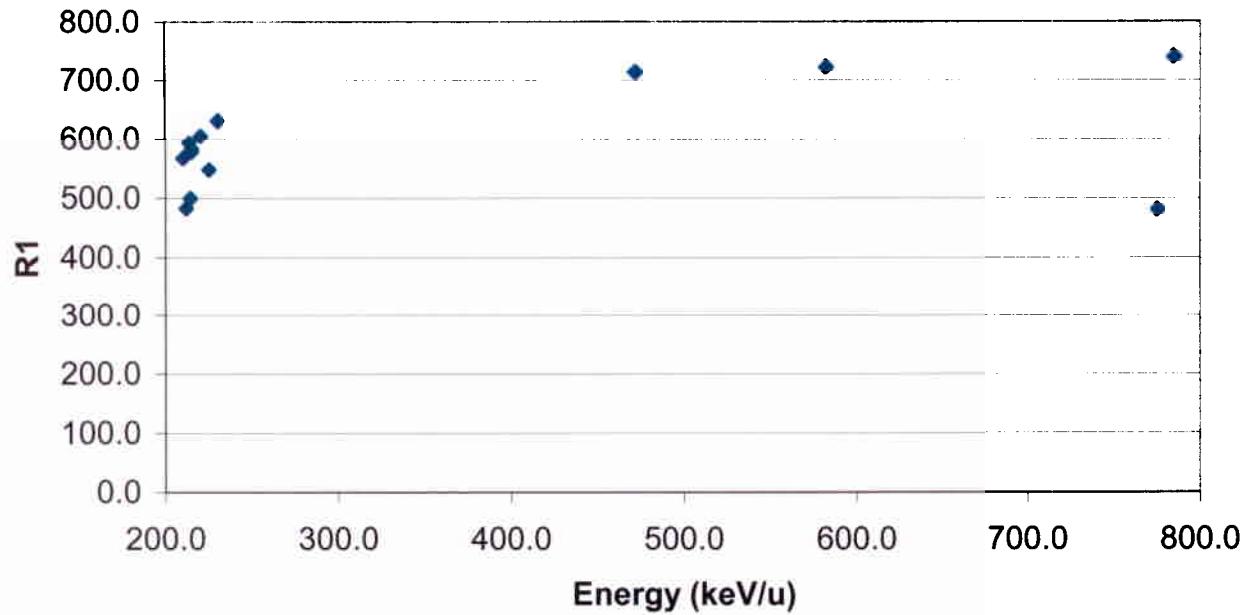

2. Investigate the consistency of these constants
 - Do both monitors measure the same property? Do the constants vary with energy?

Results

- Three different ratios related to C_{EM} and C_β were calculated for fourteen runs of a ^{21}Na beam
 - i. R_1 , ratio of elastic monitor counts to FC4 reading
 - ii. R_2 , ratio of elastic monitor counts to beta monitor counts
 - iii. R_3 , ratio of beta monitor counts to FC4 reading
- Results indicate that R_2 is the most constant ratio, with both R_1 and R_3 displaying larger deviations

$$R1 = (\text{Elastics} \times E_{in}^2) / (\text{FC4} \times \text{LT} \times t \times P)$$

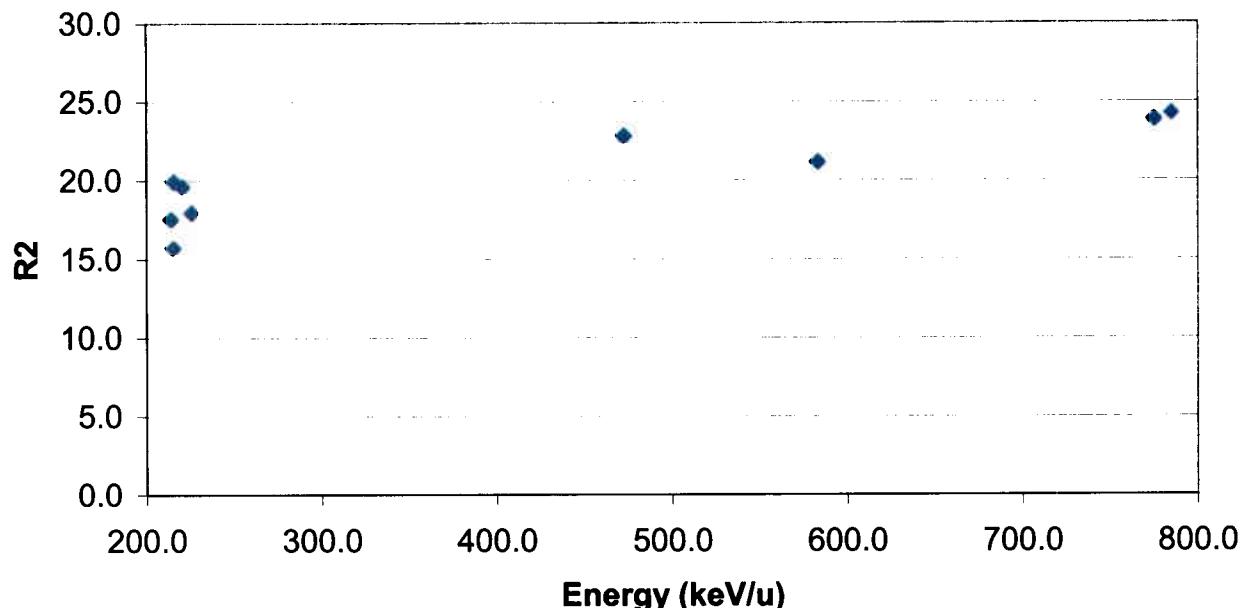

R1 variation with Energy

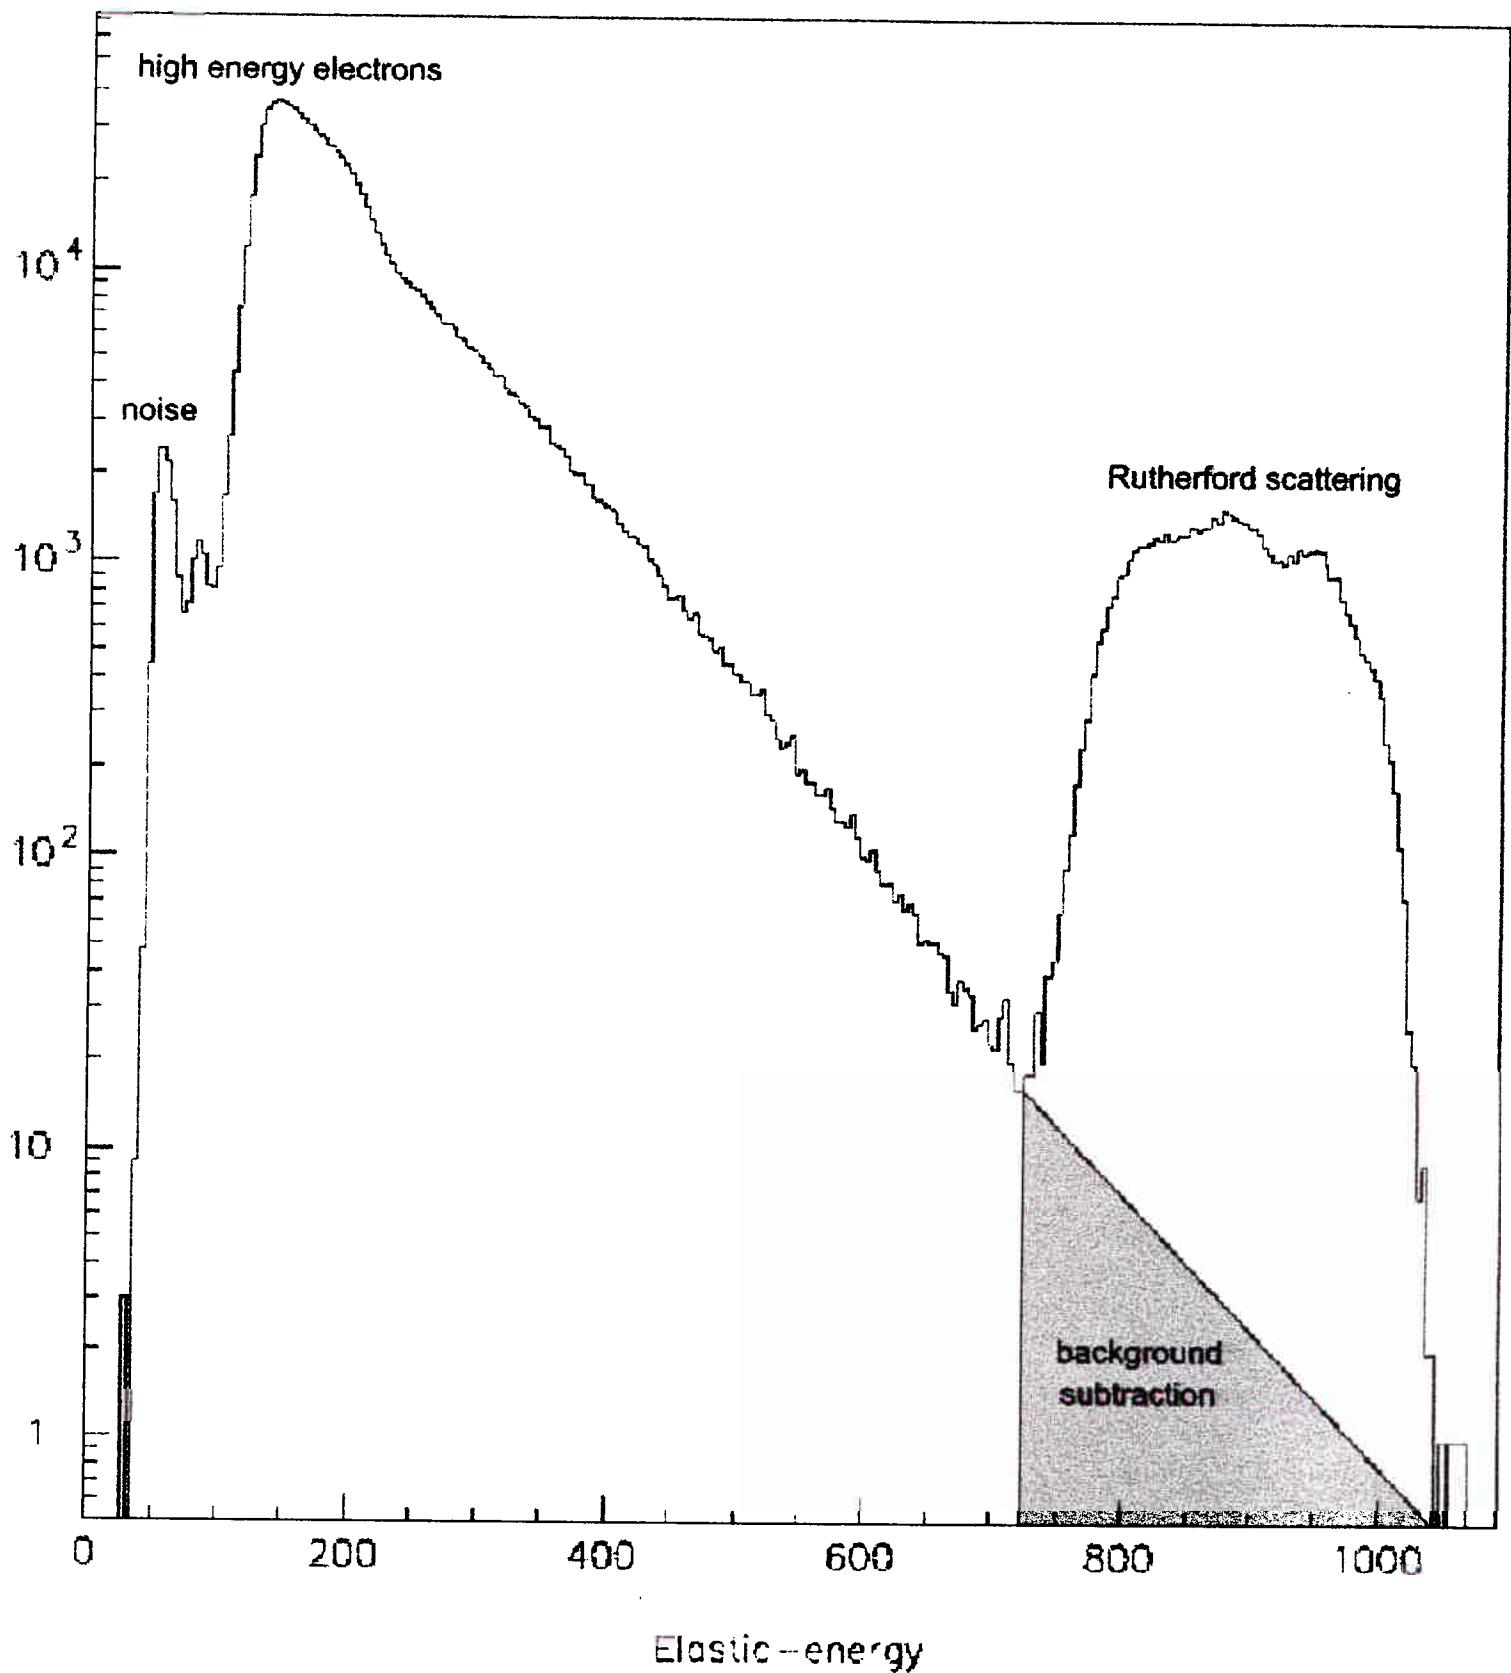

Run	E_{in}	Pressure	FC4 (epA)	Livetime	Time (s)	Elastics	R1

Recommendations

- At the start of all runs at a new energy, place Faraday cup between MD1 and ED1
- Add up Faraday cup readings for each charge state, and compare them to the elastic monitor count taken for the same time period
 - Provides continuous relationship between beam current and elastic monitor counts even when elastic cross section deviates from pure Rutherford

$$\sum Q_i / \text{Elastics} = \text{constant}$$
