

Optics w/ Stable Beam

Calib. B-vs-I 2 hr (no beam)
-- MD1, MD2, Q9, Q10

Install Wobbler $\frac{1}{2} + 2 + \frac{1}{2}$ days

-- focus vs Q9/10, SXn

-- acceptance vs θ ^{20, 21 Ne}
 $E_M < 300$

-- acceptance vs $\delta E/E$

Gas target, ^{21}Ne beam $\frac{1}{2} - 1$ day

-- test BeamScaling 3.0

● better $I_{\text{MD1}}(E, M, q)$

● valid-tune test
