## DRAGON FINAL SLIT BOX

- shield scintillator?
- distance to scintillator?
- electronics for pmt?  
(Tennelec accepts 50mV signals)  
(do we need FFA?)

- $^{68}\text{Ge}$  only 5N
- $^{22}\text{Na}$  1.275 + 5N

• I have already measured  $\approx 1\text{Hz}$  on the MCP with  $^{68}\text{Ge}$  source outside box.
